important: change pad often

Use a coin or a key to do a scratch test, to check if all the protective coating has been removed.

When white abrasion occurs, carry out a full clean to remove all the protective coating

For initial cleaning after basic cleaning, see "initial cleaning".

^{*} basic treatment / structure: B: coated / C: waxed / D: oiled / E: sealed / F: untreated / G: maintenance care product / P: polishing / S: structured / V: heavily soiled

important: if needed

Do not coat floors with PUR coating provided in the factory

before protective treatment: the floor must be perfectly stripped, thoroughly rinsed and completely dry!

Let dry protection treatment completely between the layers and before use

Process treatement of protection: see descriptione of method

For initial cleaning with maintenance cleaner after protective treatment, see "initial cleaning".

^{*} basic treatment / structure: B: coated / C: waxed / D: oiled / E: sealed / F: untreated / G: maintenance care product / P: polishing / S: structured / V: heavily soiled

Information about the flooring

Wetrok AG cannot accept any liability for damages due to improper use.

For security information, see the safety data sheet at www.wetrok.ch.

Wear protection: gloves, safety goggles, work clothes

Follow the information and remarks on the label, product data sheet and material safety data sheet.

The product data sheet describes the product and gives information about its application, storage. See www.wetrok.ch

The recommended colours of pad and brushes consist to the actual wWetrok product range

Follow the special cleaning and care instructions of the floor manufacturer

The cleaning and care instructions are recommendations and suggestions and apply to floorings in object quality.

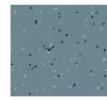

Rubber floor coverings are sensitive to strong alkalines such as soft soap and basic cleaners. Colour change: material damage! Rubber floor coverings are sensitive to certain solvents such as ketone and ester.

Fat-soluble colorants such as shoe polish or asphalt can penetrate into rubber floor coverings: diffusion

Mould-release agents from production (silicone or paraffin-based) must be completely removed before basic treatment.

Paraffin-like antioxidants can migrate to the surface over time and form white clouds. These can be polished out.

Rubber floor coverings are a blend of synthetic and natural rubber, sulphur (vulcanising agent), fillers and colour pigments.

Distinguishing feature: fire assay with a glowing hot needle in an inconspicuous place: the needle penetrates only slightly, typical rubber smell, no crater formation.

Remove loose dirt before every cleaning, damp mop smooth floors and vacuum structured floors.

Cleaning agents and surface treatments may alter the appearance and properties of a floor's surface.

Test on an inconspicuous spot to find which product is suitable for your requirements.

Test beforehand on an inconspicuous spot to see if the cleaning agent or surface treatment damages the floor.

Dirt-trapping zones, incl. dirt-trapping mats (Wetrok Gardamat) in the entrance, at least 7m long, greatly reduce the amount of dirt tracked into the building.

If you have any questions, please don't hesitate to contact us.
